-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

### Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

## DETAILED ACTION

### ***Claim Rejections - 35 USC § 103***

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-24 are rejected under 35 U.S.C. 103(a) as being unpatentable over Kim (US 6,930,150), newly cited taken with Wang et al (US 5,852,124), both newly cited.

The reference to Kim (US 6,930,150) teaches the modification of polyolefin resins with a styrene-maleic acid copolymer that may, itself, be modified. In Kim, note column 5 (lines 15-36) which teaches the inclusion of polybutene, which at column 6 (lines 58-60) may be added to other polymers including, at column 8 (lines 31-60), styrene-maleic anhydride polymers which may be functionalized.

The reference to Wang et al shows the rubber modified styrene-maleic anhydride as herein recited and claimed, for modification of other thermoplastic resins as an impact modifier. Note column 2 (lines 23 et seq.), column 3 (lines 9-33) and column 8 (lines 40-65) for the use with other polymers. The polymers listed therein contain many that are disclosed by Kim at column 9 (lines 50 et seq.). as such, the use thereof in a polybutene composition would have been an obvious modification to an artisan at the time the invention was made. All other characteristics and physical features would have been obvious to a skilled artisan desirous of particular qualities for end-use. Further, the

Art Unit: 1711

method of producing the composition, as recited herein, entails steps conventional to the art.
